DNA primase is an enzyme involved in the replication of DNA and is a type of RNA polymerase. Primase catalyzes the synthesis of a short RNA (or DNA in some organisms) segment called a primer complementary to a ssDNA (single-stranded DNA) template. Primase is of key importance in DNA replication because no known replicative DNA polymerases can initiate the synthesis of a DNA strand without an ...

Genome editing, or genome engineering, is a type of genetic engineering in which DNA is inserted, deleted, modified or replaced in the genome of a living organism. Unlike early genetic engineering techniques that randomly inserts genetic material into a host genome, genome editing targets the insertions to site specific locations.. In 2018, the common methods for such editing use engineered ...

Vaccination coverage and decline of the disease burden globally. We provide detail on three vaccinations: DTP, measles, and polio. These diseases (plus tuberculosis) were the original six targeted by the WHO for their Expanded Programme on Immunization (EPI) and mass vaccination coverage expanded greatly. The EPI was initiated by the WHO in 1974 to build on the success of smallpox eradication ...

A blood calcium test is ordered to screen for, diagnose, and monitor a range of conditions relating to the bones, heart, nerves, kidneys, and teeth. The test may also be ordered if a person has symptoms of a parathyroid disorder, malabsorption, or an overactive thyroid; often ordered when a person undergoes a general medical examination.
