Answers About Immunity. The immune system has its own circulatory system called lymphatic vessels, which allow white blood cells to catch intruders. Other important parts of the immune system include the tonsils and adenoids, thymus, spleen, lymph nodes, appendix, certain areas of the small intestine and bone marrow.

Answers About Immunity - Berkeley Wellness

The immune response is specific and the body will only recognize the chicken pox virus, which has different antigens than other viruses. The chicken pox vaccine usually does NOT make people sick, because the vaccine is made of a dead or weakened form of the virus.

immune practice questions - johnbowne.org

Distinguish between antigen and antibody. Antigens are substances that provoke an immune response (they're the ultimate target for the immune system). Antibodies are simply proteins that are secreted as a result of the antigen provoked immune response. In short, antigens cause the disease and antibodies cure it.

Exercise 35A: The Lymphatic System and Immune System ...

On the other hand, the adaptive immune system provides a second line of defense against certain, previously encountered pathogens. Here, the only answer choice that deals with the recognition of specific antigens is the production of memory B-lymphocytes.

Immune System - AP Biology - Varsity Tutors

The immune system is precisely that — a system, not a single entity. To function well, it requires balance and harmony. There is still much that researchers don't know about the intricacies and interconnectedness of the immune response.

How to boost your immune system - Harvard Health

If a person already has memory cells against that pathogen, then the immune response (production of antibodies and killer T cells) is so fast that the body does not know that it was infected before the immune system clears the infection. 23. How do viruses and bacteria get around the immune system?
