Definition of Probability of Compound Events. A compound event is one in which there is more than one possible outcome. Determining the probability of a compound event involves finding the sum of ...

### **Probability of Compound Events: Definition & Examples ...**

Definition: The complement of an event  $A$  is the set of all outcomes in the sample space that are not included in the outcomes of event  $A$ . The complement of event  $A$  is represented by  $\bar{A}$  (read as  $A$  bar). Rule: Given the probability of an event, the probability of its complement can be found by subtracting the given probability from 1.

18.05 class 3, Conditional Probability, Independence and Bayes' Theorem, Spring 2014. or simply 'the probability of  $A$  given  $B$ '. We can visualize conditional probability as follows. Think of  $P(A)$  as the proportion of the area of the whole sample space taken up by  $A$ . For  $P(A|B)$  we restrict our attention to  $B$ .
