Mitral regurgitation is the second most frequent indication for valve surgery in Europe. Echocardiography is essential to assess the aetiology of mitral regurgitation, as well as valve anatomy and function. An integrative approach is needed to assess the severity of mitral regurgitation. Indication for intervention in primary mitral regurgitation is guided by symptoms and risk stratification ...

by the WoundSource Editors. When developing the plan of care for the patient with a chronic wound, it is imperative first to look at the "whole" patient and not just the "hole" in the patient. 1 As we do, we are able to review any medical conditions or disease states that may affect wound repair and healing. Millions of Americans are affected by chronic wounds each year.
