Nuclear chemistry is the subfield of chemistry dealing with radioactivity, nuclear processes, such as nuclear transmutation, and nuclear properties.. It is the chemistry of radioactive elements such as the actinides, radium and radon together with the chemistry associated with equipment (such as nuclear reactors) which are designed to perform nuclear processes.

In chemistry, a steady state is a situation in which all state variables are constant in spite of ongoing processes that strive to change them. For an entire system to be at steady state, i.e. for all state variables of a system to be constant, there must be a flow through the system (compare mass balance).A simple example of such a system is the case of a bathtub with the tap running but with ...

For simplicity, we consider here only one single ion (and omit the summation). This does not affect the general validity of the procedure. ← P. Atkins and J. de Paula: Physical Chemistry, 8th Edition, W. H. Freeman and Company New York, 2006, Table 21.4, p. 1019 ←

The meaning of the symbols and the mathematical derivation of this formula is described here. This approach is used in aqion as the default algorithm.. Temperature Compensation: $EC \Rightarrow EC + 2.5$. The EC of most natural waters, including seawater, increases with temperature 1-3% per degree Celsius.

Electrical Conductivity (EC) - aqion

Malignant melanoma (see the image below) is a neoplasm of melanocytes or a neoplasm of the cells that develop from melanocytes. Although it was once considered uncommon, the annual incidence has increased dramatically over the past few decades.

En 1780, Luigi Galvani descubrió que cuando dos metales diferentes (cobre y zinc, por ejemplo) se ponían en contacto y, a continuación, ambos tocaban diferentes partes de un nervio de un anca de rana, hacían que se contrajesen los músculos de dicha extremidad. [3] Llamó a este fenómeno "electricidad animal" y sirvió de modelo para el diseño de la primera pila.
