Natural Acidity of Rainwater. Pure water has a pH of 7.0 (neutral); however, natural, unpolluted rainwater actually has a pH of about 5.6 (acidic).[Recall from Experiment 1 that pH is a measure of the hydrogen ion (H<sup>+</sup>) concentration.]The acidity of rainwater comes from the natural presence of three substances (CO<sub>2</sub>, NO, and SO<sub>2</sub>) found in the troposphere (the lowest layer of the atmosphere).

Four lab-scale aerobic reactors were constructed using a 7.6 L glass container (desiccation jar, 27 cm height × 23 cm wide) with a sealed lid (Anchor Hocking Company, Lancaster, OH) (Fig. 1, Figs. S2-S3). These (replicate) reactors were heated and maintained at  $34 \pm 1$  °C (digestate temperature) by a warm-water jacket to expedite the digestion.

In solid-state physics, a band gap, also called an energy gap or bandgap, is an energy range in a solid where no electron states can exist. In graphs of the electronic band structure of solids, the band gap generally refers to the energy difference (in electron volts) between the top of the valence band and the bottom of the conduction band in insulators and semiconductors.
