When you transition from PowerPoint 2003 to PowerPoint 2007, you might come across an annoying issue when you try to resize a shape. For some reason, the shape or object cannot be resized by dragging one of the corner or side points. Instead of holding the new size, it snaps back to a smaller height.

One of the constant complaints I get about my two major courses is that there is no index to the presentation. I do not understand why Microsoft has not managed to solve this problem after all these years; apparently providing base functionality is not as important as coming up with new interfaces that don't really add anything to the base functionality of the programs.

Problem with Point of View: Beginner writers usually mix 1st, 2nd, & 3rd person into one paragraph.. Incorrect Example: It can be confusing to the reader if you shift the point of view in your writing (meaning starting in the 3rd person, moving to the 2nd person, then switching back to 3rd). Increasing one's [3rd person] workload is taxing on both your [2nd person] physical and mental health.
