## Strogatz Nonlinear Dynamics Solutions

Steven Strogatz is an applied mathematician who works in the areas of nonlinear dynamics and complex systems, often on topics inspired by the curiosities of everyday life. He loves finding math in places where you'd least expect it—and then using it to illuminate life's mysteries, big and small.

### Steven Strogatz

Dynamical systems theory is an area of mathematics used to describe the behavior of the complex dynamical systems, usually by employing differential equations or difference equations. When differential equations are employed, the theory is called continuous dynamical systems. From a physical point of view, continuous dynamical systems is a generalization of classical mechanics, a generalization ...

### Dynamical systems theory - Wikipedia

Maps. A discrete-time, affine dynamical system has the form of a matrix difference equation:  $x_{n+1} = Ax_n + b$ , with  $A$  a matrix and  $b$  a vector. As in the continuous case, the change of coordinates  $x \rightarrow x + (I - A)^{-1}b$  removes the term  $b$  from the equation. In the new coordinate system, the origin is a fixed point of the map and the solutions are of the linear system  $A^n x_0$ .

### Dynamical system - Wikipedia

Dynamical System. A means of describing how one state develops into another state over the course of time. Technically, a dynamical system is a smooth action of the reals or the integers on another object (usually a manifold). When the reals are acting, the system is called a continuous dynamical system, and when the integers are acting, the system is called a discrete dynamical system.

I create most of the animations programmatically, using a python library named "manim" that I've been building up. I've also used Grapher for a number of 3d animations. Everything is open-source on github, and a small community has emerged of people who use it, but before you dive in I feel like a warning is in order.
