VBA functions are built into Visual Basic for Applications, the scripting language that you use to create macros. You can use VBA functions in any program that supports VBA (including Microsoft Word and Access).. Worksheet functions are specific to Excel.They're the functions that you're used to using in spreadsheets already—things like CONCATENATE, COMBIN, and VLOOKUP.

When to use the VLOOKUP Function in Excel? VLOOKUP function is best suited for situations when you are looking for a matching data point in a column, and when the matching data point is found, you go to the right in that row and fetch a value from a cell which is a specified number of columns to the right.
